

FIRST IN QUALITY AROUND THE WORLD.

NOW WITH TAMIYA'S 4 FINISHING AIDS, YOUR MODEL TURNS INTO A MASTERPIECE

TAMIYA ACRYLIC PAINTS

The new Tamiya paints are made from water-soluble acrylic resins and are safe, easy to use and will ensure an excellent finish to your prize models. These new paints come in 16 glossy colors, 45 matt finish colors and 7 transparent colors plus an exclusive thinner and flat base for producing a semi-gloss from the gloss colors. Each bottle contains 23ml and because of the excellent coverage, will last longer and be more economical than other paints.

TAMIYA PAINT MARKER

Easy and professional results can be yours with Tamiya's paint markers. Use it as you would a marking pen. Enamel paint formulated for the painting of plastics. Even the unskilled painter can now achieve beautiful results. For the expert modeler, indispensable for detail painting and time saving. Excellent for wood, metal, glass as well as all plastics.

Contents: 8 grams.

TAMIYA MODELLING BRUSHES

Fine horse hair & quality weasel hair brushes for plastic model painting, flat & pointed in 7 sizes, specially designed for modellers.

TAMIYA POLYCARBONATE PAINTS

For those difficult to paint polycarbonate car bodies, this paint was formulated to adhere to Lexan plastic bodies while remaining flexible and fuel resistant. Easy water clean up, one coat coverage. Peel and chip resistant.

TAMIYA COLOR ACRYLIC PAINT

USE ON ANY MATERIAL

Wood, Metal, Home Appliances, Styrol resin, Styro-foam and in fact just about any surface will accept acrylics.

It will not fade and retains its high gloss permanently. It contains no lead so it is safe and completely non-toxic. Tamiya acrylics add the final touch to your modelling and artistic skills.

OVERPAINTING, SHADING AND CAMOUFLAGE

Overpainting and camouflage present no problems with these acrylics. 2 or more colors on to the same surface is easy to apply. They can be brushed or sprayed on any pre-painted enamel or lacquer surface without problems; however, do not paint over acrylics with lacquer. After the first coat of paint has dried completely, the 2nd coat can be applied. Shading and detail highlights can be applied with ease and are more realistic and lifelike when finished with Tamiya paints.

REQUIRES NO SPECIAL HANDLING

Cleanup after painting is no chore as plain water will cleanse all brushes and painting implements if done prior to drying. If the paint has already dried, the special acrylic thinner will dissolve the paint left on the brushes. The large heavy glass jar is stable and hard to tip over, and with the large mouth, large flat brushes can be utilized. As the bottle caps are moulded in the exact same color as the paint, location of that special color is never a problem.

•Glossy basic color

X1	Black	Gloss Black
X2	White	Gloss White

AVAILABLE NOW! PROFESSIONAL RESULTS WITH TAMIYA'S PAINT MARKER

EXCITING NEW RELEASE FOR FINISHING MODELS OF PLASTIC AND OTHER MEDIUMS.

Shake paint marker well first, then push tip against a firm surface to break seal and start paint flow. Tamiya's paint marker ensures you of safe, easy painting without brushes and messy cleanup.

UNIQUE FLAT CUT PEN TIP FOR PAINTING OF BOTH NARROW AND WIDE AREAS.

Model painting and detailing with a brush requires a fine technique, learned with years of practice. Tamiya's Paint Marker, with its tough felt tip frees you from the worry of lack of experience and allows you to detail your subject like never before. The flat cut tip is 4mm wide and 1mm thick. Use the narrow edge to paint small areas, stripes or markings. By using the marker like a flat brush you can paint wide areas and expect a beautiful smooth flowing finish because of the enamel paint characteristics. With its unique tip, it is easy to paint projecting parts with no overflow; badges and emblems of cars; motorcycles and figures. Raised surfaces on moulded parts can be highlighted with a light touch of the marker for added realism. Accessories on military models, lights and landing gear detail are now easy to finish realistically. When necessary, the marker tip can be cut to a desired thickness by a knife, for those special applications.

X1	Black	Gloss finish
X2	White	Gloss finish
X3	Royal Blue	Gloss finish
X5	Green	Gloss finish
X6	Orange	Gloss finish
X7	Red	Gloss finish
X8	Lemon Yellow	Gloss finish
X11	Chrome Silver	Metallic
X12	Gold Leaf	Metallic
XF1	Flat Black	Matt finish
XF15	Flat Flesh	Matt finish
XF56	Metallic Grey	Matt finish

Use on raised surfaces.

Detail painting

Tamiya's paint markers are the easiest, safest and surest way of achieving truly professional results on all surfaces, but especially on those hard to detail small areas of vehicles and figures, such as those shown at the right. Each paint marker contains the highest quality enamel paint available and in a quantity enough to completely cover 12—15 1/24 scale automobiles. Many detailing techniques recommend the use of two different types of paints. Tamiya paint markers make this technique of detail painting both easy and extremely effective.

USE IN COMBINATION WITH TAMIYA ACRYLIC PAINTS.

Enamel paints can be applied over acrylics and lacquers, so the Tamiya Marker can be used to detail stripe, lettering and markings without fear of damaging the undersurface. Tamiya Acrylic Paints can also be applied over Tamiya Paint Marker finishes, so using the two in combination will enhance your model finishing techniques and achieve results that will amaze you.

SAME COLOR NAMES, SHADES AND NUMBER AS TAMIYA ACRYLIC PAINTS.

Color names and numbers of the Tamiya Paint Marker match those of Tamiya Acrylic paints, and the color toning between the two is almost perfect. Excellent gloss and matt.

TAMIYA PAINT MARKER 12 COLORS

NOW AVAILABLE A SPECIAL PAINT FOR POLY- CARBONATE (LEXAN) CAR BODIES

TAMIYA COLOR FOR POLYCARBONATE

These paints have been formulated for use on Polycarbonate (Lexan) R/C car bodies. For brush and spray painting. Each bottle contains 23ml. There are 12 bright colors to beautify your car bodies.

EASY TO USE, SAFE AND WATER-SOLUBLE. THE PAINT IS SHOCK RESISTANT, PERMANENT AND FLEXIBLE.

Tamiya polycarbonate paints are water-soluble and completely safe. They can be removed from brushes and other implements using plain water, if done prior to drying, making clean-up quick and easy. After the paint has cured, it is resistant to oils as well as water. It is extremely durable and long lasting. As these paints were specially formulated for car bodies, the paint film has good elasticity after curing and is not likely to peel or chip off when the body flexes during collisions. As it is resistant to oils, it is suitable for gas engine vehicles also.

EXCELLENT COVERAGE MAKES FOR LIGHT WEIGHT.

It is important when painting polycarbonate bodies to wash them first with a detergent solution to remove all dust and oily smears, then rinse detergent and allow it to dry. Do not wipe moisture off with a cloth as it will cause static electricity. Paint details such as window frames, panel lines etc., first, then the overall body. Since the Tamiya polycarbonate paints are opaque, they have good covering qualities with thin coats, making for a lightweight R/C car body, which is extremely important for competition vehicles.

MIXING OF COLORS AND OVERPAINTING IS EASY.

Painting in two or more colors and complicated patterns is not difficult, and the colors mix easy to match any hue you desire. As the paint is applied from the inside, but viewed from the outside, paint the dark colors first, followed by the lighter shades. When using masking tape, remove the tape prior to the paint completely drying, due to its flexibility and tendency for the paint to peel from the body after being cured. If the paint

Paint these bodies from the inside.

should want to peel away when removing the tape, run a sharp hobby knife along the tape edge. The tape will then come off cleanly without removing the paint from the surface. When spray painting, thin by adding 4 parts of acrylic thinner to 10 parts of paint. The thinner is also useful for removing cured paint from brushes and unwanted areas.

★The painted surface will remain vulnerable to scratches and marring until cured, even though tack free, for about 24 hours.

JUST RELEASED! BRUSH UP WITH QUALITY PAINT BRUSHES

TAMIYA MODELING BRUSH

The final finish requires specialized modelling brushes. They come in 7 sizes and two types. 5 of the brushes are fine horse hair from Chinese and American horses. 2 brushes are of weasel hair. These are quality detail brushes at reasonable prices.
